The Time is Now...

DeFeat DeFazio!

AMERICA AT RISK

- U.S. nationalizes medical industry – vital 18% of our economy seized. DeFazio votes for hostile takeover, forcing Oregonians into socialized medicine.
- U.S. banking, automobile, mortgage, and student loan industries seized by U.S. government.
- Oregon farming and timber industries devastated by overregulation. DeFazio supports failed policies causing massive 17% unemployment rate! (*government claims 9.5%*)
- DeFazio announces support for heavy taxes on fuel and energy – citing fraudulent science as excuse.
- U.S. government spends another 4 trillion dollars – nation on verge of bankruptcy, debt exceeds \$12 trillion.
- U.S. policies cripple energy industries – Americans buy 30% of energy from unstable foreign nations.
- U.S. expands war in Middle East – borrows money to pay for war from Communist China.
- Illegal Immigrants continue to flood U.S.
- DeFazio favors abortion, even partial birth.
- DeFazio asks for 13th term – supports anti-Constitutional big government policies and ignores states' rights.

Meet Dr. Art Robinson

Art Robinson is an internationally respected scientist and educator, a successful businessman, a skilled public speaker, and father of six admirable young Oregonians raised on their southern Oregon farm – the family home for 30 years.

Art is an expert on energy and widely known for his petition signed by more than 31,000 American scientists exposing human-caused global warming as a fraud. He worked on medical and defense issues during the Reagan Administration and energy issues during Clinton and Bush.

Please support Art Robinson for Congress.

America & the Robinson Family

Like all Americans, Art Robinson's life has intertwined with that of his country. Below is a brief history of both.

Freedom in the 1950s

In Victoria, Texas, young Art Robinson reads with pride, in his grade school *Weekly Reader*, that Americans produce most of the world's steel, concrete, aluminum, machine tools, automobiles, chemicals, food, and many other products. The United States is the powerhouse of the world. America is filled to the brim with citizens who are the hope and example of freedom to people everywhere – many of whom still languish in war, poverty, and tyranny.

The “brain drain” is a constant concern in other countries as productive people throughout the world flood into America to work and live as free men should – unfettered by government tyranny.

Art and Laurelee – September 1988

Ted Robinson, Art's father, is completing the design and construction of the Union Carbide chemical plant at Sea Drift, Texas – his love of engineering driving him to produce the finest machinery possible and his work unimpeded by the tentacles of government. Multitudes of such men are at work throughout the land.

Freedom in the 1960s

Nuclear power – the greatest technological advance in human history – is being installed throughout America, providing low cost, safe, clean electrical energy for the next leap forward in world freedom and prosperity. Americans are going to the moon, and plan to go to Mars. The computer revolution has begun, and the world watches in awe. Is there nothing that free Americans cannot accomplish?

Ted Robinson has built chemical plants in Puerto Rico, Brazil, Scotland, England, Belgium, India, and Japan. American know-how in thousands of industries spreads hope and freedom everywhere. Homi Bhabha fathers nuclear energy in India – the first step in lifting a billion people from the bondage of poverty.

High over the French Alps on January 24, 1966, two explosions are heard, a Boeing 707 is gone, Homi Bhabha and Ted Robinson are dead – buried in the snow at the top of Mont Blanc.

America doesn't miss a beat. She has tens of thousands of engineers and scientists. They are leading hundreds of thousands of their younger peers, and tens of millions of productive people who are

working to turn their dreams and knowledge into reality.

Art has graduated from Caltech. Awarded his PhD at the University of California at San Diego, he is appointed to the faculty there.

Freedom Falters in the 1970s

America is in trouble. Washington is flooded by career politicians, pursuing personal goals rather than the best interests of our country. They trade their votes for power to those who bid the highest.

These politicians begin crippling American industry with taxation and regulation. They stop the building of nuclear power. They are uninterested in the manned exploration of Mars and beyond.

“They are binding American industry in the first shackles of tyranny and wastefully spending American blood and treasure in war and welfare programs that sap ambition and destroy the opportunities of tens of millions of previously productive Americans.”

Art Robinson

America is adrift, and her people are turning inward. Envy and fear of technology begin to be taught in American public schools – replacing reverence for the American Constitutional Republic, individual human freedom, and the values that built our nation.

Art Robinson – and his scientist wife Laurelee – have left UCSD and founded an Institute with Art's long-time friend and colleague Linus Pauling. They have originated a new discipline – now known as “metabolomics” – a revolutionary medical advance.

As President and Research Professor of their institute, Art assumes that their medical discoveries will soon be available to the American people. He is naive. The tentacles of Washington politicians have already reached into American medicine – choking off innovation.

American medicine – with a legacy that freedom made possible – is still the finest in the world, but costs far more as a result of politicians whose expansion of taxation, regulation, and litigation is gradually strangling free enterprise in all American industries.

Steel, aluminum, machine tools, automobiles, chemicals, and multitudes of other American products that Art admired in his *Weekly Reader* are still being made – but the industries that make them are moving abroad, unable to thrive in the new American political climate. Medical care cannot easily move abroad – it just costs more

Matthew and Robinson Books – 1999

Growing Up Together – 1995

and stagnates under the assault from Washington.

Freedom's Hope in the 1980s

Ronald Reagan is elected, the Soviet Union nears defeat, and President Reagan begins to cut away the political cancer that has been consuming the American dream. He proclaims that it is “Morning in America,” and real hope returns.

Reagan moves to free American workers and industries. He reduces taxation and regulation and an economic resurgence results, but Reagan is soon gone – and career politicians regain control.

Art and Laurelee have moved to Oregon in 1980, and with colleagues establish the Oregon Institute of Science and Medicine. They also work with the Reagan Administration on defense, and Art writes a platform plank at the 1988 Republican Convention.

By November 1988, they have 12-year-old Zachary, Noah 10, Arynne 8, twins Joshua and Bethany 6, and Matthew 18 months.

It is Armistice Day, November 11. President Reagan has made a wonderful speech. All of the Robinsons seem to have a stomach flu, but by morning, they are much better – except for Laurelee.

Laurelee is dead.

The report states that she died of acute idiopathic hemorrhagic pancreatitis – her pancreas releasing enzymes that punctured an artery. She was ill for 24 hours. She was 43 years old.

A silent, almost eerie calm settles upon the Robinson children. Their grief is deep, but it does not harm them. The loving hand of God quiets, it comforts, it gently leads. It is a thing unseen.

A Scientist and Six Children

Art entered a very different life. The Lord raised the children, Art ran errands, and the seven Robinsons grew up on the farm together.

They completed the defense work – traveling cross country many times together, publishing tens of thousands of copies of instructions and books that FEMA distributed throughout the United States, and building civil defense displays purchased by the federal government and displayed to millions of Americans.

Without Laurelee, their home school became an exercise in self-learning, and Art and the children, with help from friends and colleagues, gradually developed a self-teaching curriculum and an array of children's books that they now publish.

More than 60,000 American children now use their curriculum for grades 1 through 12, and the six children have put each other through college and graduate school with this family business.

Zachary, Noah, Arynne, Bethany, and Matthew earned BS degrees

in chemistry – Zachary, Noah, and Matthew completing those degrees in two years at college. Joshua earned a BS in mathematics.

Zachary and Arynne earned doctorates in veterinary medicine from Iowa State University. Noah earned his PhD in chemistry from Caltech - finishing in three years and publishing four papers in the *Proceedings of the National Academy of Sciences*. In 2010, Joshua, Bethany, and Matthew are graduate students at Oregon State University – all working to earn PhD degrees in nuclear engineering.

The seven Robinsons divided the work as needed, with some adjustments. After five years of one-course meals – twice a day, Art is permanently replaced in the kitchen by his hungry peers. Today the children still do their farm work on weekends home from school.

The whole family and their colleagues gradually built the Oregon Institute of Science and Medicine into a world-class laboratory for the study of protein molecular clocks and biomedical research.

Their most recent publication involves a protein intimately involved in Alzheimer's and Parkinson's diseases. Robinson publications are highly respected and widely read by scientists throughout the world. One research publication – Art's favorite – is authored by all seven Robinsons. They all participated in the work.

The Robinsons love music and resurrect church pipe organs as a hobby. They have also republished most of the life's recordings of the great gospel singer George Beverly Shea – a project in which they have produced 27 CDs with more than 400 songs.

Art has written the pro-science, pro-technology, pro-free enterprise newsletter *Access to Energy* for 17 years, inheriting this work from scientist and refugee from Communism Petr Beckmann. *Access to Energy* is science for laymen in areas of interest in human affairs. One-third of the subscribers are scientists and engineers.

As a result, Art was asked by *The Wall Street Journal* to write

Noah in the Laboratory – 2003

the lead editorial in their edition published during the Kyoto global warming meeting in Japan, where Vice-President Al Gore attempted to impose energy rationing upon the American people. Art and Zachary wrote this editorial, and Art and Noah wrote another on this subject for the *Journal* a few years later.

Based on a scientific review article they authored entitled “Environmental Effects of Increased Atmospheric Carbon Dioxide,” the Robinsons circulated a petition by mail that has been signed by more than 31,000 Americans with university degrees in science – urging the government not to ration and tax energy supplies on the basis of the scientifically invalid claims of human-caused global warming.

These signatures demonstrate that Al Gore's claim of a scientific

Arynne and Friend – Before Veterinary School

consensus favoring his opinions is entirely untrue. This petition has helped to delay crushing new energy taxes on American families.

The hard work, principles, academic excellence, personal accomplishments, and productive enterprises of the Robinson family have, by example, inspired and helped many other American families.

Nation in Crisis in 2010

The dead hand of government has stopped the American juggernaut. Suffering under crushing taxation, regulation, and government-sponsored litigation, Americans cannot even make the energy they need. They buy 30% of their energy from unstable nations abroad.

Lost jobs, lost homes, lost savings and retirement plans, and lost hope for a future as prosperous as that of their parents and grandparents: Americans are watching as their way of life is destroyed.

That life was built on American freedom – freedom that permitted each American to produce more than he consumed and to prosper. That freedom has been taken away by career politicians – including the 12-term congressman who now represents Oregon District 4.

“As a result of governmental oppression, Americans are no longer able to compete in the world, regardless of their hard work and innovation. American workers have seen their jobs shipped abroad, their industries de-capitalized, and their country de-industrialized.”

Art Robinson

Influenced by demagoguery, the American people have made a terrible mistake. They have elected an extreme leftist President and a corrupt Democrat majority in Congress led by socialists who hold the American Constitution, the American Republic, and the American people themselves in contempt.

In one year, more than 25% of American free enterprise has been seized. Trillions of dollars have been spent – money printed or borrowed from China and other competitors. Many think the American people will soon be forced to declare national bankruptcy.

Candidate for District 4 in 2010

On Sunday, March 21, most Americans were relaxing or worshipping in church. Peter DeFazio, however, was on the floor of the U.S. Congress – voting to end private medical care in the United States. Americans lost their free enterprise medicine by four votes. One of those votes was Peter DeFazio's!

This 12-term career politician is also working to impose high taxes on American fuel and electricity consumers and has consistently used his office to work against American free enterprise.

Throughout America, men and women are working to improve their family's lives and those of their fellow citizens.

Their dreams, however, cannot be realized, unless the destruction of our Constitutional Republic is halted and repressive laws restricting American freedom are repealed.

Art Robinson has the experience, qualifications, and character to represent District 4 in Congress and to work effectively toward the restoration of American freedom. He is not a professional politician and has never before sought or worked for public office – exactly what our nation needs at this critical time.

At the founding of our Republic, it was expected that the elective positions in our government would be held by private citizens – people who, as a result of accomplishments in private life, had shown that they could be trusted in public office. They were expected to serve briefly as a patriotic public service.

Art never expected to run for public office. When his two terms as class president and one as house president as an undergraduate at Caltech were over, he closed his “political career.”

These are, however, unusual times, and people find themselves doing unusual things. Most of us have never thought of becoming firefighters, but when our house is on fire and the fire engines are away, we transform into firefighters without hesitation.

Our country is on fire, and freedom is at stake. Now is the time to elect citizens whom we can trust to put this fire out!

“And Peter DeFazio? Let's send him out into the economy that he helped wreck – to seek employment.”
